ICBT Campus Project Log Sheet – Supervisory Sessions for CIS6035 -Development Project

Notes on use of the project log sheet:

1. This log sheet is designed for meetings of more than 15 minutes duration, of which there must be at least six (06) during the course of the project (SIX mandatory supervisory sessions).
2. The student should prepare for the supervisory sessions by deciding which question(s) he or she needs to ask the supervisor and what progress has been made (if any), since the last session.
3. A log sheet is to be brought by the student to each supervisory session.
4. The actions by the student (and, perhaps, the supervisor), which should be carried out before the next supervisory meeting, should be noted briefly in the relevant section in the form.
5. The student should leave a copy (after the session) of the Project Log sheet with the supervisor and to the coordinator (for the Manager to include his signature). One copy should be retained with the student.
6. It is compulsory that students bring their previous supervisory session log sheets together with the project file during each supervisory session.
7. The log sheet IS a deliverable for the project, and it is an important record of a student's organization and learning experience. The student MUST hand in the log sheets to the program office after submitting the softcopy to the University along with the hardcopy within 05days of the Turnitin submission.

Student's Name: Rajhalakyaa Mahendrarajah

University Number: 20343574

Date:18.01.2026 **Meeting No**:02 **Intake**: **May 2025**

Project Title: Web based Gym Management System

Supervisor's Name: **Mr.N.Jayapriyan** **Supervisor Signature**: N. Jeyapiriyan

Manager's Name: T.Sutharsan **Manager's Signature**:

.

Work progression as to date (noted by student BEFORE mandatory supervisor meeting):
Before the third supervisory meeting, I continued developing the Web-Based Gym Management System by working on the admin dashboard and establishing the database connection. I implemented some core admin-side functionalities and tested the system. During this process, I encountered several coding and database-related errors, which I documented for discussion with my supervisor. I also reviewed the overall system flow to identify areas that needed improvement.

Items for Discussion (noted by student BEFORE mandatory supervisor meeting):
For this session, I planned to discuss the current progress of the project, including the implemented code and admin dashboard features. I also wanted to seek guidance on resolving the errors encountered during database connectivity and functionality testing. In addition, I intended to ask for feedback on the next development steps and whether any documentation or design improvements were required at this stage.

Action List (to be attempted by student by the NEXT mandatory supervisory meeting – TO BE FILLED SUPERVISOR):
The supervisor advised me to create appropriate system diagrams for the project, including diagrams that clearly represent the system structure and functionality. I was instructed to prepare UML diagrams such as Use Case, Class, and Sequence diagrams to better explain the system design. The supervisor also recommended using these diagrams to support the methodology and documentation sections before the next supervisory meeting.

Note: A student should make an appointment to meet his or her supervisor (via phone call or e-mail) at least 3 days prior to supervisory session. In the event a supervisor could not be booked for consultation, the Manger should be informed 2 days prior to supervisory meeting so that a meeting can be subsequently arranged.
